

VERSA[®] PUMP

FRP-AF Series

FIBER REINFORCE PLASTIC - AXIAL FLOW PUMP

CORROSION RESISTANT - AXIAL FLOW PUMP

FRP - AF Series

Flow :82-1820m³/h

Head:2-6m

Outlet diameter:4-16inch

Pump material:FRP or engineering plastic

Operation temperature: ≤80

Solid particle content: ≤10%

Main features

Working Principle:Vertical axial flow type pump

The pump series is installed vertically, the pump body is put into water directly

Easy to install,flexible to move,convenient to use.

Main Part Material: FRP or engineering plastics

Flow rate is very large with high efficiency and low energy cost

The pump have good corrosion resistance,it is suitable for seawater,salty water or other small concentration acid or alkaline solutions etc.

Common driven by diesel engine or motor
